STUDENT REGISTRATION SYSTEM

S

INTRODUCTION

One of the problem of the registrar office in many schools is the long queue of students to register for upcoming semester. This is also what the students complain about, the long process of registration. We propose this system, a user-friendly login interface and registration system not only speeds up enrollment but also encourages student engagement from the start.

S

S

OBJECTIVES

One of the primary objective of a student registration system is to to facilitate the registration of students for the upcoming semester. This will help speed up the work of the registrar staff and also speed up the registration of each student.

Specific Objectives:

• Convenience: This registration system allows the students to register their subjects without the need to visit the school.

S S

OBJECTIVES

- Efficiency: It reduces the administrative burden on organizations by automating data collection and processing, saving time and resources compared to manual registration methods.
- Accessibility: It enables student to register at any time, even outside of regular business hours, accommodating diverse schedules and time zones.

	username	varchar (35)		
	password	varchar (35)		

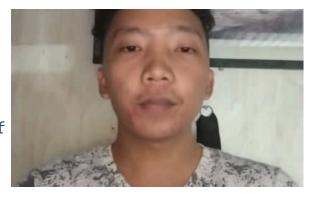

S

SYSTEM ARCHITECTURE

- 1. Course Catalog: This module allows students to browse through available courses, view course descriptions, prerequisites, and other relevant information. It should provide search and filter functionalities to help students find courses easily.
- 2. Registration: The registration module enables students to enroll in courses for the upcoming semester or academic term. It typically includes features like adding or dropping courses, checking for schedule conflicts, and confirming enrollment.
- 3. Schedule Planning: This module helps students plan their class schedules by allowing them to visualize their course selections and view potential schedule conflicts. It may include features like drag-and-drop interface, calendar integration, and automatic generation of conflict-free schedules.
